Feature aluminium rainscreen cladding to entrance areas fixed to Kingspan Benchmark Karrier panels

DETAILS

This new 60,000 sq metre warehouse at G Park Doncaster was completed in a 16 week build programme.

The installation of a solar PV system has enabled Next to manage their own electricity costs. The 2.5 MWh system is expected to produce 2,217 MWh of electricity per annum with 100% of this energy being consumed on site.

In addition, the building is expected to offset 1,101 tonnes of CO₂ annually.
